ScanSafe WIRe: Web Intelligence Reporting

Business Intelligence Meets Web Security Reporting

Around the globe, organizations face common demands; improve performance, streamline processes and increase productivity, and all while maintaining or lowering IT budgets. Given these contrasting goals, businesses are looking for improved ways to understand and optimize their systems and policies to achieve benefits without incurring additional expenses.

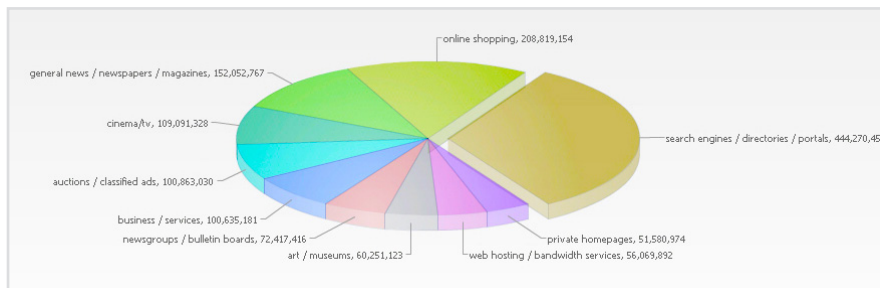

The current global economy has accelerated a trend towards improved Business Intelligence tools; or BI as it is often called; in order to carefully assess an organization's risk and provide easy access to accurate, detailed information which will allow them to gain immediate insight into their business and achieve clarity in a time of uncertainty.

Historically, reporting specifically for Web traffic has been fairly inflexible and shallow. This used to be sufficient, however as the Web has evolved into a critical communication and application platform, the requirement for in-depth reporting capabilities has grown in importance. ScanSafe has re-engineered reporting with state-of-the-art Web Intelligence Reporting (WIRe) providing the in-depth visibility into Web traffic that has now become essential.

Why WIRe?

- Improved cost visibility
- Enhanced user and risk management
- Improved business insight and informed decision making
- Increased flexibility and accessibility of data
- Significant savings in administration time

Enable Complete Flexibility in Reporting

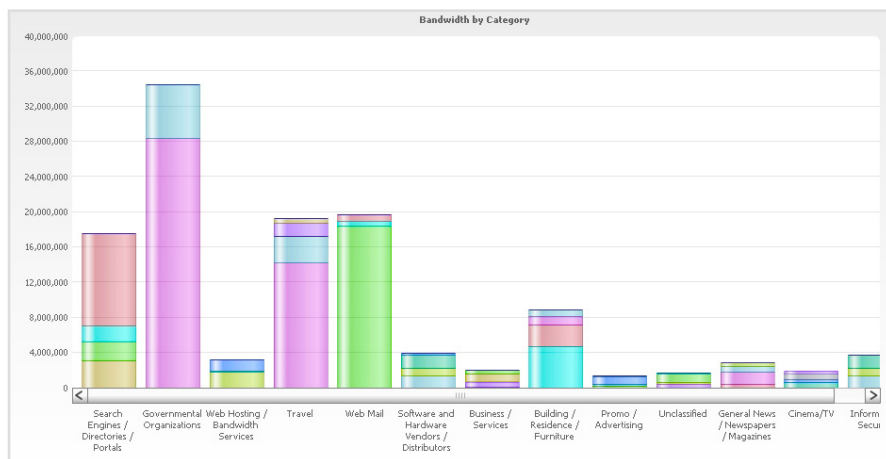

Unlike most reporting tools, WIRe has been designed from the ground up to offer customers complete Web traffic data flexibility and visibility. WIRe helps businesses develop a new generation of informed executives driving companies towards greater transparency, cost-effectiveness and efficiency.

With more than 65 pre-defined reports and the ability to save an unlimited number of custom and composite reports, WIRe offers immediate access to business insight. WIRe empowers customers to create instantly generated reports, using near real-time data, in any combination of the thousands of options provided by ScanSafe. Organizations then have the flexibility to drill down into specific areas for further investigation. WIRe provides users with an un-matched level of detail with access to up to one million rows of flow data at any one time. These detailed reports are critical to organizations allowing them to remain cost-effective and competitive.

Control Business Cost with Strategic Insight

As well as Web usage and policy reporting, WIRe can report on individual Web applications providing better business insights across your entire organization. The results are improved cost visibility, strategic alignment and enhanced user and risk management.

For many organizations, the responsibility of creating reports can be an extremely time consuming and daunting task. WIRe can transform reporting; saving IT departments significant administration time which will free up IT resources for other business critical projects. Reports can be output in multiple formats and built using reporting elements such as pie charts and graphing. WIRe also offers customers the ability to schedule reports which can be automatically sent to a requested group of users on a daily, weekly or monthly basis.

About ScanSafe

ScanSafe is the pioneer and largest global provider of SaaS Web Security, ensuring a safe and productive Internet environment for businesses. ScanSafe solutions keep malware off corporate networks and allow businesses to control and secure the use of the Web. As a SaaS solution, ScanSafe eliminates the burden of purchasing and maintaining infrastructure in-house, significantly lowering the total cost of ownership. Powered by its proactive, multilayered Outbreak Intelligence™ threat detection technology, ScanSafe processes billions of Web requests and millions of blocks each month for customers in over 100 countries.
